

■ MS-6600 Mechatronics Training System (for PLC-310)

With PLC-310

Since PLC (Programmable Logic Controller) was firstly introduced in 1970, it has been widely applied to various industrial uses such as machine and process controls.

The Modular Production System stations allow various simulations of real production processes that exist in industrial field. The system is universal, industry-based, modular and flexible for further expansion. Students can learn the entire process of production, such as feeding, processing, etc.

Each station simplifies the training of operation and can be expanded sequentially step by step through building complex automated procedure.
